

# COMPREHENSIVE THREAT AND VULNERABILITY ASSESSMENT SERVICES

DDCues performs a full spectrum of security solutions that includes threat and vulnerability assessments, security plan development, protective services, and secure transportation. Current Clients include Utility Service Providers, Fortune 500 Companies, Renewable energy companies, environmental remediation companies and State, Local and Federal Government entities.

The DDCues Threat and Vulnerability Assessment (TVA) is a deliberate analysis by vetted professionals to identify potential threat actors, assess system integrity and vulnerabilities, and providing tangible, realistic recommendations to reduce security risks.

The DDCues physical security and risk/vulnerability assessment is comprised of two parts: a threat assessment and a vulnerability assessment. The threat assessment is conducted to assess the potential of specific security-related incidents and potential threat actors. The vulnerability assessment is a systematic evaluation to detect security gaps in the current physical security system. This includes crime prevention through environmental design (CPTED) factors. It is used to determine the effectiveness of countermeasures in protecting specific facilities from specific aggressors.

The DDCues security and risk/vulnerability assessment will analyze the following:

- Geographic characteristics and physical layout of the facility
- Security equipment capabilities/vulnerabilities
- Application of security technology and other security-related protection equipment
- Security deployment schedules
- Operational requirements
- Employees' ability to respond to security emergencies and existing policies/procedure
- General appropriateness of the protective measures currently in place
- Security-specific training previously provided to company personnel
- Internal security incidents which have impacted company security
- Localized threat environment and potential malicious actors

All DDCues TVAs include tangible, cost effective recommendations that will substantially improve security posture and allow for increased safety while decreasing risk.

**Deliverables - You will receive a comprehensive report that includes photos/video, graphics, quantitative risk scoring, prioritized action items and aerial media.**
