

When the asset cannot be reversed, the defense cannot be passive.

Institutional-grade security for individuals and family offices holding significant digital assets.

Digital assets are the most concentrated, most portable, and least recoverable form of wealth a family can hold. A single compromised key, intercepted phone number, or signed transaction can transfer a fortune in seconds, with no chargeback, no reversal, and no insurer of last resort. Families who protect this wealth well do not rely on the device in a drawer or the promises of an exchange. They operate an active defense, designed, implemented, and monitored by specialists.

DDCues builds and runs that defense. We do not custody your assets. We make certain that no one, including us, can move them without your authority, and that you would know the moment someone tried.

documented physical attacks
on holders in 2025

WHAT WE PROTECT AGAINST

Endpoint compromise. Malware and screen-capture tools that harvest keys at the moment of signing, on the same devices used for everyday email and browsing.

Social engineering. Targeted phishing that tricks even sophisticated holders into authorizing a transaction that drains their wallet. A single user lost \$50 million this way in December 2025.

Infrastructure and identity. Exchange compromise, exposed API keys, and SIM-swap attacks that hijack the phone number behind every password reset and authentication code.

BEGIN WITH A CONFIDENTIAL CONVERSATION.

Every engagement starts with a private intake call to understand your holdings, your current posture, and your concerns. No obligation, and no exposure of sensitive detail until you are ready.

HOW WE DEFEND IT

Vault architecture. Multi-signature custody designed so that no single key, person, or location can move your assets. Keys held in tamper-resistant hardware, signed offline, with documented recovery and succession. You retain exclusive control.

Identity and access hardening. We eliminate the weak links: text-message authentication, unprotected password vaults, and carrier-level SIM-swap exposure. Replaced with hardware-backed credentials that cannot be intercepted or copied.

Intelligence and threat profiling. A curated assessment of your exposure across the surface, deep, and dark web: breached credentials, exposed family detail, and the footprint an attacker would exploit, validated by analysts and continuously reduced.

24x7 security operations. An in-house operations center, augmented by specialized threat-intelligence and fraud-monitoring partners, watching your wallets, accounts, and digital footprint in real time, acting on threats before a loss occurs.

Incident response on retainer. When minutes matter, a pre-negotiated response: on-chain tracing through established forensic partners, coordination with exchanges to freeze stolen funds, and law-enforcement liaison. No scrambling mid-crisis.

WHY FAMILIES AND OFFICES CHOOSE DDCUES

Independent by design.

We never custody your assets, so our only incentive is your security and your independence.

Discretion as standard.

Built on the discipline that governs our regulated federal and healthcare clients, where confidentiality is not optional.

Capability others lack.

Family office IT, generalist firms, and custodians each solve a fragment. None runs an around-the-clock defense on your assets. We do.

BEGIN WITH A CONFIDENTIAL CONVERSATION.
